

Generative AI as an Explainer

Have the topic of flotation explained for a specific target group (e.g., primary school pupil, university student, wastewater treatment plant operator, retiree, etc.) in a maximum of five sentences and reflect on the accuracy and clarity of the explanation.

1. Use Academic AI to generate an explanation.
2. Analyse whether the explanation is factually correct and easy to understand.
3. Then improve the explanation using your own subject-matter expertise.
4. Final step: Post the original Academic AI response and your revised version in this Padlet. Use the chosen target group as the title.
5. Briefly discuss the AI-generated explanation and what you changed and why.

All explanations and comments will be collected in the Padlet, followed by a plenary discussion.
